

Button Sticker Sheet Tips to Install – Read and check out the pictures!

Clean the top of the button with alcohol and cotton ball, or similar cloth. Take your time.

Grab a roll of standard scotch tape, take a piece about 2” long, and apply the scotch tape right on top of the decal you’d like to apply.

Carefully bend the corner of the sticker sheet while simultaneously pulling the tape until the top of the decal begins to be removed from the sheet.

Once the decal is removed, try not to touch the bottom of the decal, as it will fingerprint easily, since it’s a clear, yet, heavy duty decal. Use the extra section of tape to center over the button.

When you have it centered, apply it, and carefully slide your thumb back and forth to fully apply the decal. When the decal is applied carefully and slowly pull the scotch tape off.
